

NET_SCAN SECURITY REPORT

Automated Vulnerability & Attack Surface Assessment

1. Executive Summary

This document outlines the findings of an automated security scan performed on the target IP 192.168.56.1. The scan evaluates exposed services, open ports, and potential vulnerabilities to determine the overall attack surface and risk posture.

Target IP:	192.168.56.1
Date of Audit:	2026-03-25 11:28:13
Ports Scanned:	1024
Overall Risk Level:	CRITICAL

2. Exposed Services Matrix

The following ports were found open, exposing services to the network:

PORT	SERVICE	STATUS
139		OPEN
135	RPC	OPEN
445	SMB	OPEN

NET_SCAN SECURITY REPORT

Automated Vulnerability & Attack Surface Assessment

3. Threat Intelligence & Vulnerabilities

Port 139 ()

- SMB exploitation
- Ransomware vector

Port 445 (SMB)

- Ransomware vector
- Worm propagation
- File sharing

4. Mitigation Recommendations

1. Implement Network Segmentation: Ensure critical servers reside in isolated subnets/VLANs.
2. Disable Unused Services: Close legacy ports like Telnet (23) and FTP (21).
3. Apply Zero Trust Policies: Authenticate and encrypt all internal traffic explicitly.
4. Patch Management: Update exposed services resolving to known CVEs immediately.
